Experience

Software Engineer | Target | Aug 2022 - present

- Develop and maintain Electron apps and shared libraries using React and Redux to power core register workflows, including sales, returns, ATM management, price lookups, and pay-in/payout operations
- Lead frontend development efforts, facilitating daily stand-ups and acting as a point-of-contact engineer for cross-team collaboration across backend, product, UX, and store operations
- Manage deployments to production of nearly 2000 stores supporting over 3 million transactions daily through CI/CD pipelines leveraging Docker, GitHub Actions, and Vela
- Build modular UI components with React Hooks and integrate them with backend RESTful APIs
- Create monitoring dashboards with Grafana and Kibana that expose real-time metrics, error trends, and transaction health
- Author technical documentations to strengthen engineering standards, consistency, and knowledge
- Provide technical guidance through pair programming, code reviews, and onboarding
- Contribute to production stability by leading incident responses, writing RCAs, and implementing fixes to prevent recurrence

UI Developer | Koniag Government Services | Mar 2022 - Aug 2022

- Implement full-stack development of a digital records management system leveraging React, Node.js, and KendoReact UI to deliver a solution for scanning, tagging, storage, and access control
- Collaborated cross-functionally with product managers, QA, and design teams to define visual and interaction standards, iterating on designs in Figma to validate key features and optimize app usability

Application Developer | Koniag Government Services | Oct 2020 - Mar 2022

- Engineer and deliver a React and React Native app (web, IOS, and Android) for USDA Animal Health Services, designed to consolidate and synchronize data sourced from over 200 Azure microservices
- Design the local data persistence layer using SQLite for offline functionality and state management, ensuring application reliability and data integrity even when disconnected from the central GraphQL API
- Spearheaded component library governance by building and publishing private npm packages for UI consistency and accelerating development velocity

Frontend Developer | Operation Spark | Nov 2019 - Oct 2020

- Develop reusable interfaces using TypeScript and React, ensuring stability and scalability of all frontend views built on the Material UI design system
- Implement end-to-end testing and unit testing with Selenium and Jest for application reliability and code coverage

Skills

JavaScript (ES6+), Typescript, React, Angular, Node.js, HTML/CSS, RESTful APIs, Jest, Git, Agile Methodology

Education

Loyola University New Orleans, Bachelor of Science in Computer Science

Certifications

- IBC Fundamentals of JavaScript, Functional Programming, and Web Development
- AWS Certified Developer - Associate
